

Fall Planting of Milkweed

Fall is the perfect time to get a head start on the monarch season for next year. If you'd like to start preparing for spring the easy way, plant your perennial milkweed seeds (and plants) in the fall.

Why is fall planting easier?

1. Cold Stratification Au Natural

Most milkweed requires a cold stratification process which helps your seeds to germinate. Old man winter takes care of this for you naturally by providing freezing temps outdoors.

2. Second Chances

If your seeds don't sprout as planned next spring, you can easily replace them with seeds or plants. If you plant bad seeds in spring, by the time you realize it, it may be too late to replant for that season.

So plant seeds in fall, then make the necessary alterations next spring.

Thank You!

save our monarchs

Thank you for helping save our beloved butterflies...
...one milkweed at a time.

 PLEASE DONATE so we can continue in saving our endangered monarchs!!!
